

BOLL STRUCTURAL LACQUER FOR PLASTIC SPRAY

The structural lacquer for plastic is a fast drying and well binding paint based on acrylic resins. It is ideal to paint plastic bumpers, strips and other plastic elements. It develops an attractive structural, durable coat of black or dark grey matt. The paint can be applied directly without any priming on all plastic surfaces.

Application:

Carefully clean and degrease and dry the place to be covered with lacquer. Cover the adjacent surfaces with paper. Before use, shake the container well for about 3 minutes. Keep the container at a distance of 15-20 cm from the painted surface. After use, turn over the container and spray until the valve is empty. After about 20 minutes the structure can be painted.

Physical properties:

form:	aerosol
colour:	black/dark grey
boiling temperature:	-24°C
ignition temperature:	235°C
flash point:	-42°C
self-ignition:	it does not self-ignite
vapour pressure at 20°C:	4.3 bar
density at 20°C:	0.795 g/cm ³
explosive limit:	upper: 18.6 % vol. / lower: 1.1 % vol.
organic solvents:	73.8 %

Comments:

All technical specifications are approximate. We recommend to test the material to make sure it is appropriate for the specific application. The producer reserves the right to improve the product and change its technical properties, including modifications to the specification.
